The Principle of Complementarity is still more interesting. It states that, if two objects have interacted once, they will always keep on interacted even if separated by a large distance. Does this have an analogue to the classical mind-matter system? Indeed, **the mind-matter interaction is a quantum effect**. If you have interacted with an object once the effect of that interaction is eternal and is stored in your brain. It never really gets washed out. Some time one may forget a particular event, but the event is never deleted from the brain. This is the reason why when one gets old one remembers the events of the childhood more vividly. The 'back up' memory never fails! This is precisely what Neils Bohr calls '**Principle of Complementarity**'. Bohr, in his philosophical way, used to say '**we must remember that, in the drama of existence, we are both players as well as actors**'.

- At the same it was a blessing in disguise that he and his colleagues had to work very hard to come up with such a proposal in a very short time, and on November 26/27, 1954, Bhabha tabled the complete proposal of the DAE to silence his critiques. Based upon the geological survey of availability of nuclear fuels i.e. the non-availability of uranium and availability of thorium, the proposal envisaged a 3-phase programme. I shall not elaborate on the details of this programme which by now is well known and **accepted** to be most relevant for our country.

- After Einstein's death the Institute was on a look out for a proper substitute, and the authorities approached several reputed scientists. However, no one was willing to go there. Everyone gave different reason, but the one given by the famous scientist Richard Feynman, a Nobel laureate, speaks volumes. While rejecting the offer he audits IAS in following terms, in his famous book 'Surely you are joking Mr. Feynman':

In India we have practices of both kinds, professional as well as non-professional systems of education and a variety of methods suitable for our societal needs; we had them in the past, we have them presently and I am sure they will continue in the future also. Unfortunately, I do not foresee over-riding *professionalization* of dubious character to *vanish* from the educational scenario. However, before I discuss some of the features of professional education, past, present and future, let me make a few general remarks on the education systems that are in vogue today in our country, and their needs.

The concept of professional education was not common in ancient India; there were not many specializations! True concepts of 'Knowledge for all, and Health for All' pervaded during those periods. The knowledge of medicine was available to all who desired to have it. Sushrut and Jivaka are said to be the pillars of Indian medical practice. The code of conduct for the practitioners is prescribed in the 'Sushrut Samhita'. Similarly, Hippocrates provided the code of conduct for Greek medical practitioners, through his famous 'Hippocratic Oath' which the medical practitioners even of today, all over the world, are administered before they get their medical degrees. I wonder if the word 'hippocracy' indeed originated from this discipline; we all know what the present practitioners of medicine have as their priorities.

However, as mentioned earlier, the real progress in this direction came when Padmabhushan Prof. Jayant P. Naik (the founder of the coveted Indian Institute of Education in Mumbai and Pune) was invited as Advisor to the Government of India on all matters pertaining to educational reforms. The main thrust of Prof. Naik's policy was 'Education for All, and Health for All'. In order to achieve this goal, and in view of the heterogeneous structure of the Indian society, several formats of educational systems were necessary.
