A Three Day Online Faculty Development Programme On “Data Science Behind Natural Language Processing” (Online)

Brochure for the Program:

About the FDP

Natural Language Processing (NLP) is a discipline in Computer Science and Artificial Intelligence. It is the communication between people and machines to both interpret our meaning and to construct valid responses. The field has been around since the 1950s and you may have heard of the “Turing Test” developed by Alan Turing. As the data can come in a variety of different forms including documents, spreadsheets, audio recordings, emails, JSON, and so many, many more. One of the most common ways that such data is recorded is via text. That text is usually quite similar to the natural language that we use from day-to-day.

Faculty Development Program on "Machine Learning" (Online)

Brochure for the Program:

About the workshop

Machine Learning (ML) is the study of computer algorithms that improve automatically through experience. It is seen as a subset of artificial intelligence. Machine learning algorithms build a mathematical model based on sample predictions or decisions without being explicitly programmed to do so. Machine learning is closely related to computational statistics, which focuses on making predictions using computers. The study of mathematical optimization delivers methods, theory and application domains data, known as training data, in order to make to the field of machine learning. In this online FDP we are giving a practical approach on machine learning.

A 5 Day FDP on Integration of renewable energy systems-Research tools/Industry perspective

Brochure for the Program:

<p>About the Faculty Development Program</p> <p>This five day Faculty development program is aimed at enriching the skills of faculty and researchers with topic of Integration of Renewable Energy Systems - Research Tools/Industrial Perspective.</p> <p>The main objective of this five day faculty development programme (FDP) is to discuss the Renewable Energy Technology, with Future Perspective of power electronics in Renewable Energy Systems (RES). Practical problems in the installation of RES, Battery Energy storage systems are discussed. This FDP will bring together faculty members from different engineering colleges and industrial fields to update their technical knowledge in the field of RES.</p> <p>Objectives of the FDP</p> <p>INTEGRATION OF RENEWABLE ENERGY SYSTEMS-CHALLENGES</p> <p>The Modern Power Systems monitoring, operation and control is dynamically changing with emergence of RES into power systems. Modern Information technology and communication systems it has become a challenge for the power engineers to observe the information flow (SCADA systems) as well as the electrical meter readings to take appropriate decisions as far as the system stability, protection and reliable supply point of view.</p> <p>Also with the modern usage of many power electronic, electronics based loads, the demand for electrical energy has increased much, leading to the power generation at the load centers such as solar photovoltaic's, wind turbines for satisfying the local load as well as pumping the surplus power to the Grid.</p> <p>In Integrating the RES to the grid there are many Issues like Islanding detection, Net metering, Protection of power equipment, Grid failures, Lines getting over loaded and under loaded, design and usage of proper ratings of inverters which convert the generated DC power in the case of solar PV panels and wind turbines into AC for local load utilization as most of the loads we use are of AC type. Issues like Battery Energy Storage systems/Management play a major role in overcoming the frequent variations in the demand and supply from the Grid point of view.</p>	<p>Eligibility</p> <p>The program is open to faculty members, research scholars and M.Tech students of all AICTE approved engineering colleges working in the concerned/allied areas of Engineering.</p> <p>Resource Persons</p> <ol style="list-style-type: none">1. INTRODUCTION

Teaching and non-teaching staff are the two essential workhorses of any academic institution. It is essential for the non-teaching staff to perform their duties responsibly to enable the teaching staff and the organization to work smoothly. They both have to work in synchronization with each other to make the organization grow. This workshop is an attempt to train the non-teaching staff with precise skills to perform their duties efficaciously.

The workshop is planned to impart both theoretical aspects and practical knowledge to the participants. Six days hands on session mainly help the programmers to understand python/c programming language. It gives very good practical knowledge on python which will be useful in their day to day lab sessions. Each day, the forenoon session deals with theoretical aspects and real time applications of the topics. The entire afternoon session is devoted to give hands on practice to the participants. At the end of the course, there will be a test to the participants and the participant who stands first will be given a prize and a merit certificate in addition to the participation certificate.
